polycarboxylate super plasticizer

polycarboxylate super plasticizer has the advantage of high water-reducing rate, low air content and better dispersiveness over average super plasticizer.

What's more, polycarboxylate super plasticizer is made by advanced process and its every comprehensive indicator is good therefore it has higher cost - effective advantage.

Key Properties

- Good dispersability,
- High water reduction
- Excellent adaptability with kinds of cement
- High flowability in mortar or concrete

Scope of application:

1. polycarboxylate super plasticizer is suitable for the preparation of early strength concrete, retarded, precast concrete, concrete, concrete, flow state of self-compacting concrete, mass concrete,

high-performance concrete and concrete, all kinds of industrial and civil construction of cast-in-site concrete pre mixing. Especially suitable for low grade commercial concrete.

2. Can be widely used in high-speed rail, nuclear power, water conservancy and hydropower engineering, subway, Bridges, highways, harbor wharf and other national large and key projects.
3. Suitable for all kinds of civil and commercial concrete mixing station.

USE method

(1) According to the design of concrete, adjust quantity the water or sand to make sure the slumps, strength, setting all to meet with requirements base on the required dosage of admixture.

(2) It apply to concrete with high performance ,strength and fluidity. When make C50 concrete, it should choose the suitable material according to relative technology rule and confirm the suitable mixing technology base on enough test data. To make sure the fluidity of concrete can meet with the requirements of engineering, the strength of concrete should have surplus .

(3)polycarboxylate super plasticizer can be added into concrete
